

ROBOT UI DESIGN REVIEW

Live localhost preview - annotated screenshot catalogue

HOW TO MARK THIS UP

- 01 Write directly on any screenshot or add a numbered note beside the element.
- 02 Refer to the page ID printed above each screenshot, for example 25-GREP-BUILDER-RESULT.
- 03 The page title identifies the app and state; the source URL is retained in the page footer.
- 04 Return the marked PDF. The labels and full-page screenshots make every comment easy to map back to the UI.

Text Extractor - Initial

The image shows a web application interface for 'TAKTIK ROBOT'. The top navigation bar includes the logo, the name 'TAKTIK ROBOT', and several status indicators: 'THE ROBOTS REPORT READY' (with a green dot), 'EN / CZ' (language), a moon icon, and an information icon 'i'. On the left, a sidebar menu is organized into three categories: 'Text' (with a minus sign), 'Image' (with a minus sign), and 'Design' (with a minus sign). Under 'Text', 'Text Extractor' is selected and highlighted in orange, with 'Index Creator' below it. Under 'Image', there are five options: 'Map Generator', 'Diagram Generator', 'Graph Generator', 'Image Generator', and 'Cover Generator'. Under 'Design', there are seven options: 'GREP Builder', 'Cover Splitter', 'Solutions Importer', 'Script Buffet', 'Barcode Generator', 'Prompt Extractor', and 'Typesetter'. At the bottom of the sidebar, there are links for 'Design Manual' and 'Brand Manual'. The main workspace has a light gray grid background. In the center, the text 'Text Extractor' is displayed in a large font. Above it, 'TEXT / EXTRACTION' is written in red, and 'AI ENABLED' is shown with a red dot. Below the title, there is a gray box with the text 'Drag image/PDF, paste, or click here to select file' and a plus sign icon. The bottom right corner of the interface shows a footer with '14 14', '2026-09-09', and 'DANIELA'.

Text Extractor - Information

Index Creator - Initial

The image is a screenshot of the TAKTIK ROBOT web application. The interface is divided into a left sidebar, a main workspace, and a top header. The top header is dark grey and contains the TAKTIK ROBOT logo on the left, a status indicator 'DOMIN'S TERMINAL RESPONDS' in the center, and language 'EN / CZ', a moon icon, and an information icon 'i' on the right. The left sidebar is light grey and contains three main sections: 'Text' with a minus sign, 'Image' with a minus sign, and 'Design' with a minus sign. Each section lists several tools with a small number in a circle to its left. In the 'Text' section, 'Index Creator' is highlighted with an orange background. In the 'Image' section, tools include Map Generator, Diagram Generator, Graph Generator, Image Generator, and Cover Generator. In the 'Design' section, tools include GREP Builder, Cover Splitter, Solutions Importer, Script Buffet, Barcode Generator, Prompt Extractor, and Typesetter. At the bottom of the sidebar, there are links for 'Design Manual' and 'Brand Manual'. The main workspace is a large light grey area with a grid pattern. It features a large heading 'Index Creator' in the center. Above the heading, the text 'TEXT / INDEX' is displayed in red, and 'AI ENABLED' is shown with a red dot. Below the heading, there is a dark grey button with the text 'Drag PDF, or click here to select file' and a plus sign. Underneath the button is a large white text area with the placeholder text 'One index word or phrase per line'. At the bottom of this text area, a small note reads 'The PDF text stays in this browser'. The bottom of the interface has a dark grey footer bar containing the page number '14 / 14', the date '2026-09-09', and the name 'DANIELA'.

Index Creator - Information

The image is a screenshot of the TAKTIK ROBOT application interface. The top navigation bar includes the TAKTIK ROBOT logo, a status indicator "ČAPEK IS ONLINE", language options "EN / CZ", a moon icon, and a user profile icon. The left sidebar contains a menu with categories: Text, Image, and Design. The "Text" category is expanded, showing tools like Text Extractor, Index Creator (highlighted), Map Generator, Diagram Generator, Graph Generator, Image Generator, and Cover Generator. The "Image" category shows Map Generator, Diagram Generator, Graph Generator, Image Generator, and Cover Generator. The "Design" category shows GREP Builder, Cover Splitter, Solutions Importer, Script Buffet, Barcode Generator, Prompt Extractor, and Typesetter. The main workspace is a large grid with a central text area displaying "Index Creator" and a smaller box with the text "Drag PDF, or click here to select file". Below this, there is a text input area with the placeholder "One index word or phrase per line". The right sidebar contains a header "TAKTIK ROBOT" and a title "Index Creator". Below the title, there is a section "What is this?" with a description of the tool's function. This is followed by a section "How does it work?" with a detailed explanation of the tool's workflow. The bottom of the interface has a footer with links to "Design Manual" and "Brand Manual".

PROCESSED LOCALLY

INFO / MAP

TAKTIK ROBOT

Map Generator

What is this?

Map Generator is an interactive world-map editor for current and historical political boundaries.

Choose a year from 3400 BCE to 2026 CE, pan and zoom the map, switch geographic layers on or off, and optionally fill countries with an imported Adobe Swatch Exchange palette.

The orange 10:7 frame is the exported area. Downloaded SVGs preserve the current crop, zoom, colours, label scale and layer visibility in named groups for further editing in Illustrator.

Some datasets have licence or time-period limitations. Read the warnings shown in the editor before commercial use, and remember that present-day physical overlays do not change with the historical timeline.

How does it work?

Geographic shapes come from locally bundled Natural Earth, licensed CShapes 2.0 and Cliopatria datasets. The map is rendered deterministically rather than drawn by AI. The selected year chooses the appropriate boundary catalogue, and the browser applies viewport, palette and layer edits. The prompt field is reserved for a future constrained map-editing resolver and does not currently change the map.

GREP Builder - Processing

The image shows a web application interface for 'TAKTIK ROBOT'. The top navigation bar includes the logo, the name 'TAKTIK ROBOT', a status indicator 'ROSSUM'S SERVER IS RUNNING', a language selector 'EN / CZ', a moon icon, and an information icon 'i'. The left sidebar contains a menu with categories: 'Text' (with sub-items 'Text Extractor' and 'Index Creator'), 'Image' (with sub-items 'Map Generator', 'Diagram Generator', 'Graph Generator', 'Image Generator', and 'Cover Generator'), and 'Design' (with sub-items 'GREP Builder', 'Cover Splitter', 'Solutions Importer', 'Script Buffet', 'Barcode Generator', 'Prompt Extractor', and 'Typesetter'). The 'GREP Builder' item is highlighted. The main workspace has a light gray grid background. At the top of the workspace, it says 'DESIGN / GREP' and 'AI ENABLED'. The title 'GREP Builder' is centered. Below the title, there are two input fields: 'FIND WHAT' and 'CHANGE TO', each followed by a large text area. Below these is a button labeled 'Generate GREP code' with a three-dot menu icon to its right. At the bottom left, there are links for 'Design Manual' and 'Brand Manual'. At the bottom right, there is a footer with the page number '14 / 15', the date '2026-09-09', and the name 'DANIELA'.

GREP Builder - Result

The image is a screenshot of the TAKTIK ROBOT web application. The interface is divided into a top header, a left sidebar, a main workspace, and a bottom footer. The top header features the TAKTIK ROBOT logo on the left, a status indicator "ROSSUM'S SERVER IS RUNNING" in the center, and language ("EN / CZ"), a moon icon, and a user icon on the right. The left sidebar contains a menu with categories: "Text" (with sub-items "Text Extractor" and "Index Creator"), "Image" (with sub-items "Map Generator", "Diagram Generator", "Graph Generator", "Image Generator", and "Cover Generator"), and "Design" (with sub-items "GREP Builder", "Cover Splitter", "Solutions Importer", "Script Buffet", "Barcode Generator", "Prompt Extractor", and "Typesetter"). The "GREP Builder" item is currently selected. The main workspace displays the "GREP Builder" tool. It has a title "GREP Builder" and a subtitle "DESIGN / GREP". Below the title is a form with two rows: "FIND WHAT" with the value "(?<=\S) {2,} (?=\S)" and "CHANGE TO" which is empty. Each row has a small square icon on the right. Below the form is a "Try again" button with a right-pointing arrow. The bottom footer contains a "Design Manual" link, a "Brand Manual" link, and a circular icon with the letter "N". On the far right of the footer, there is a timestamp "14:15", a date "2026-09-09", and a name "DANIELA".

FIND WHAT

CHANGE TO

Generate GREP code

INFO / GREP

TAKTIK ROBOT

GREP Builder

What is this?

GREP Builder turns a plain-language Find what / Change to instruction into code for Adobe InDesign's GREP tab.

Describe what should be found in the first field and what should replace it in the second. Generated fields turn orange and can be copied individually.

Choose Try again to return to your original editable instructions. Always test the result on a copy or a small selection before changing an entire document.

How does it work?

Your two short instructions are sent through the protected server route to the fixed Ministral 3 3B 2512 model on OpenRouter. It returns separate InDesign Find What and Change To strings. No InDesign document or document text is uploaded.

INFO / COVERSPLITTER

TAKTIK ROBOT

Cover Splitter

What is this?

Cover Splitter turns cover-spread PDFs into separate vector PDFs for the back and front covers. The results are collected in one ZIP archive.

Choose A5, A4, or B5 when the outside panels have a standard finished width. **Split in half** divides the full spread exactly at its midpoint. The initial choice is inferred from the first-page height when it is within approximately 3 mm of a standard trim height, and it can be changed separately for every file.

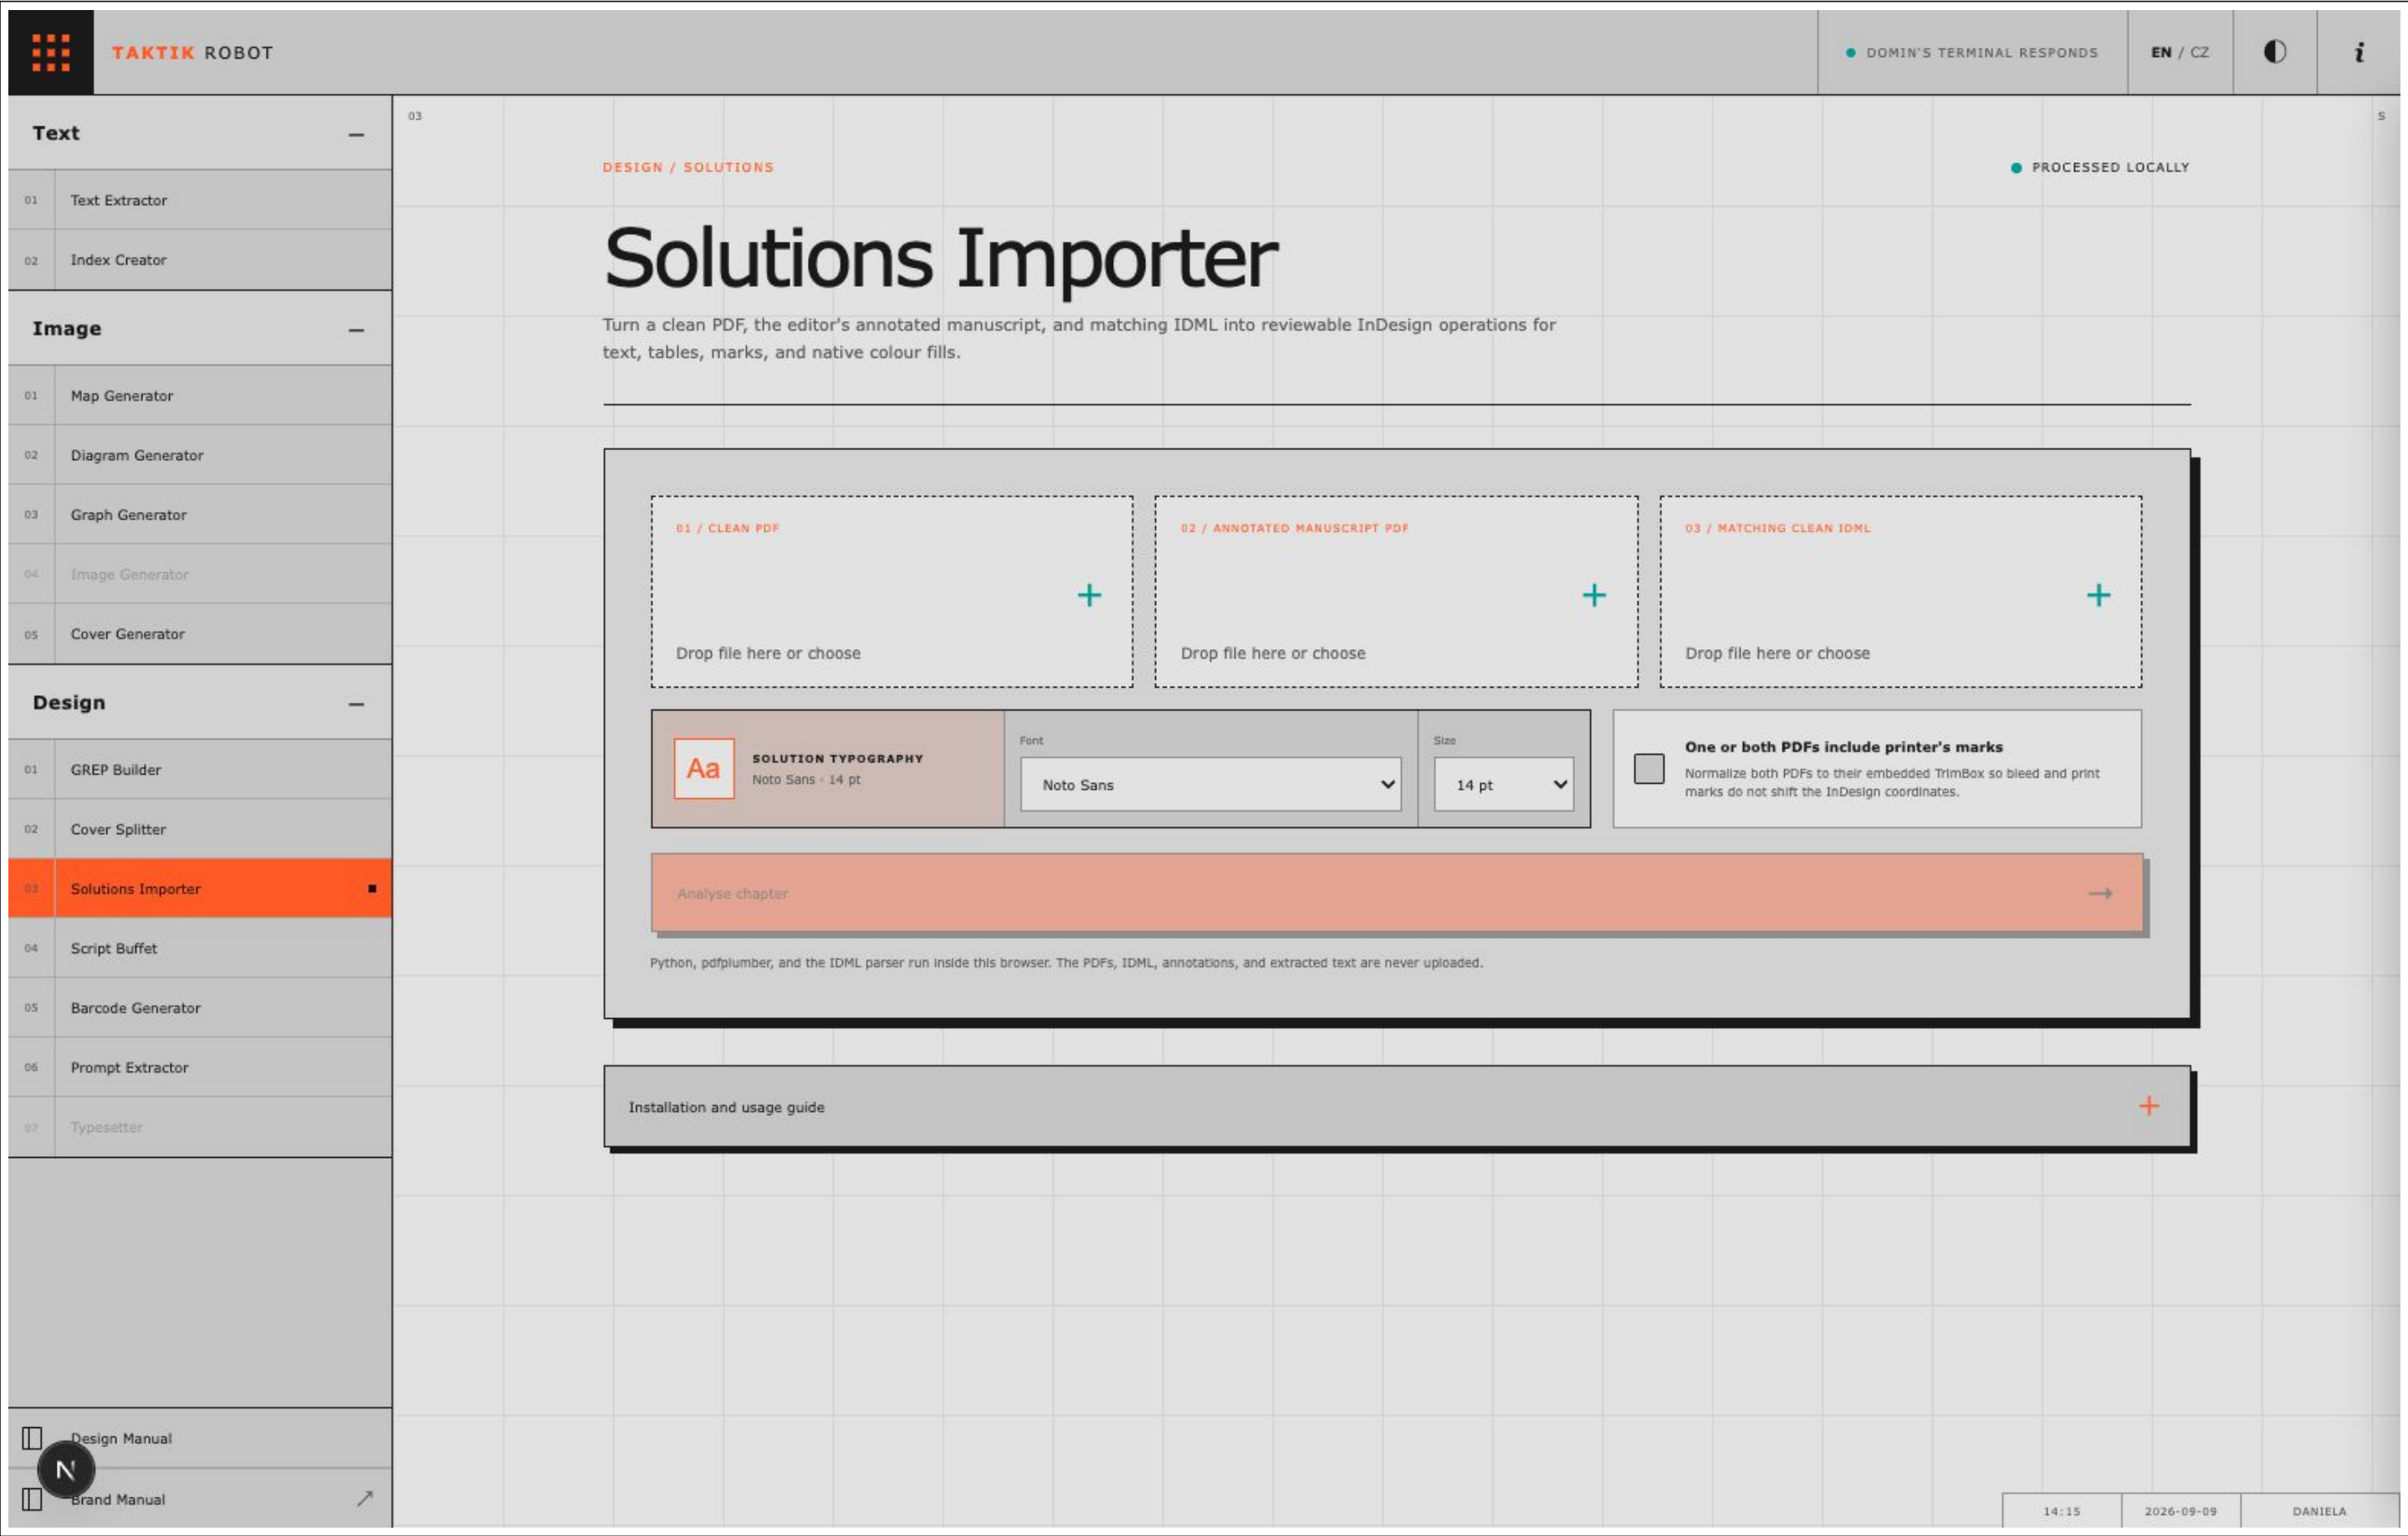

By default, only page 1 is processed and page 2 containing the inside cover is ignored. Enable **Also split the inside cover** to create four matching PDFs: page 1 left becomes _BACK, page 1 right becomes _FRONT, page 2 left becomes _FRONT-inside, and page 2 right becomes _BACK-inside.

How does it work?

The first page is previewed locally with PDF.js. When you start splitting, Python and the PDF tools run locally in this browser through Pyodide, preserving the source PDF vectors. No PDF is uploaded. The first use downloads the Python runtime and PDF package, so it can take longer than later runs during the same session.

Each source PDF may be up to 30 MB. The ZIP always contains _BACK.pdf and _FRONT.pdf files based on the original filenames. When inside-cover splitting is enabled, it also contains _FRONT-inside.pdf and _BACK-inside.pdf.

INFO / SOLUTIONS

X

TAKTIK ROBOT

Solutions Importer

What is this?

Solutions Importer reads a clean PDF, an editor's annotated manuscript PDF, and matching IDML to prepare text, table, mark, and colour operations for InDesign.

The review screen separates confident operations from ambiguous annotations. Untick false detections before downloading the JSON.

When either PDF contains bleed or printer's marks, enable the printer-mark option. The embedded TrimBox then defines the InDesign page coordinates.

The reviewed indesign-solutions-v2 JSON is imported with one canonical InDesign script. After you select the JSON and the script validates it, an InDesign ScriptUI dialog lets you choose **Advanced** layout-aware placement or **Simple** direct PDF-coordinate placement.

Advanced is recommended when the chapter has tables or structured answer boxes. If Advanced fails or produces a poor result, undo it and run the canonical script again in Simple mode; Simple has fewer assumptions and is more failsafe.

Non-text annotations and linked Illustrator, Photoshop, and raster artwork are intentionally left for manual editing.

How does it work?

Python, pdfplumber, and an IDML parser run locally in Pyodide. Clean and annotated PDF text are compared by position, PDF annotation geometry is classified conservatively, and IDML supplies page, table, style, swatch, and link metadata. No document is uploaded and no AI service is used.

INFO / SCRIPTBUFFET

TAKTIK ROBOT

Script Buffet

What is this?

Script Buffet is the shared shelf for production scripts used in InDesign, Illustrator, and Photoshop.

Filter the cards by Adobe application. Each download count records downloads in this browser only; it is not a global usage statistic.

Open **Where to install scripts** for the standard macOS and Windows locations. Adobe version and language folder names vary between installations.

INFO / BARCODE

TAKTIK ROBOT

Barcode Generator

What is this?

Barcode Generator validates ISBN-10 and ISBN-13 numbers and creates the corresponding EAN-13 publication barcode.

The PDF is vector artwork at the standard nominal size, with outlined Verdana digits and pure process black throughout.

How does it work?

The ISBN, checksum, bars, digit outlines and PDF are produced locally in this browser. Nothing is uploaded and no external barcode service is used.

Prompt Extractor - Initial

The image shows a web application interface for 'TAKTIK ROBOT'. The top header bar is dark grey with the logo on the left and status indicators on the right: 'CONNECTED TO THE MATRIX', 'EN / CZ', a moon icon, and an information icon. A sidebar on the left contains three main categories: 'Text', 'Image', and 'Design', each with a minus sign icon. Under 'Text' are 'Text Extractor' and 'Index Creator'. Under 'Image' are 'Map Generator', 'Diagram Generator', 'Graph Generator', 'Image Generator', and 'Cover Generator'. Under 'Design' are 'GREP Builder', 'Cover Splitter', 'Solutions Importer', 'Script Buffet', 'Barcode Generator', 'Prompt Extractor' (highlighted in orange), and 'Typesetter'. At the bottom of the sidebar are links for 'Design Manual' and 'Brand Manual'. The main workspace has a light grey grid background. It features a title 'Prompt Extractor' in large black font, a subtitle 'Turn manuscript illustrations into simple prompts without text or styling.', and a red status indicator 'AI ENABLED'. A dark grey button with the text 'Drag a manuscript PDF (up to 20 pages), or select' and a plus icon is centered. The bottom right corner shows a footer with the time '14:15', the date '2026-09-09', and the name 'DANIELA'.

Prompt Extractor - Information

The image shows a web application interface for 'TAKTIK ROBOT'. On the left is a sidebar with a list of tools categorized into 'Text', 'Image', and 'Design'. The 'Prompt Extractor' tool is currently selected and highlighted in orange. The main workspace features a light gray grid background. In the center of the grid, the text 'Prompt Extractor' is displayed in a large, bold font, with a subtitle 'Turn manuscript illustrations into simple prompts without text or styling.' below it. A dark gray rectangular box with a white border is positioned in the lower right of the grid, containing the text 'Drag a manuscript PDF (up to 20 pages), or select' followed by a plus sign icon. On the right side of the interface, there is a panel titled 'INFO / PROMPT' which contains the following text: 'TAKTIK ROBOT', 'Prompt Extractor', 'What is this?', 'Prompt Extractor finds meaningful illustrations in a manuscript PDF of up to 20 pages.', 'The extractor separates independent visual assets, while keeping intentional groups together with useful counts and arrangement details. Assets extracted from a framed illustration with a developed background are grouped under COMPLEX.', 'Empty areas, borders, logos, decorative marks and visible writing are ignored. Copy the finished list or download it as MD or TXT.', 'Always compare the prompts with the manuscript. Visual AI can miss an illustration or misunderstand an action.', 'How does it work?', 'PDF.js checks the page count and renders every page locally as an image. The PDF text layer is never extracted or uploaded. Page images travel in small batches through the protected server route to the fixed Mistral Medium 3.5 vision model on OpenRouter, which returns structured illustration descriptions. The browser groups and formats those descriptions.'
